

## Clearing Your DNS

---

When you visit a website in your browser, your computer will store information about that site so that you do not have to look it up again. Unfortunately, sometimes that information may change and your computer may not have the latest information about the site.

You can use the instructions below to clear your cache, ensuring you have the latest information about all the websites you visit.

### Windows - all

Open the Start menu.

1. Go to Run.
  - If you do not see the Run command in the latest versions of Windows, search for "run" or "cmd" in the Search bar.
2. In the Run text box, type: `ipconfig /flushdns`
3. Press Enter or Return, and your cache will be flushed.

### MacOS®

1. Go to Applications.
2. Go to Utilities.
3. Open the Terminal application.
4. Type: `dscacheutil -flushcache`
5. Press Enter or Return, and your cache will be flushed.
