

Install Wordpress via cPanel

1. Login to cPanel.
2. Go **Softaculous Apps Installer** section and click **WordPress**.

3. On the next page, click **Install** to start the installation process.

4. Complete the needed information fields.

- **Choose Protocol** – In most cases, use http:// format
- **Choose Domain** - Select the domain or subdomain from the dropdown box.
Note: If you have a current site and want to retain it while working on a new wordpress website, setup a subdomain first and install the wordpress into that subdomain
- **In Directory** - Specify the name of the subfolder but in most cases this is empty. In this example, it shows wordpress will be installed into a subfolder named “wp”. You may choose any name for this folder you prefer.

★★★★☆ Version : 4.2.2 Release Date : 07-05-2015

Software Setup

Choose Protocol
If your site has SSL, then please choose the HTTPS protocol.

Choose Domain
Please choose the domain to install the software.

In Directory
The directory is relative to your domain and should not exist. e.g. To install at http://mydomain/dir/ just type dir. To install only in http://mydomain/ leave this empty.

Congratulations, the software was installed successfully

WordPress has been successfully installed at :
<http://owhexample.com/wp>
Administrative URL : <http://owhexample.com/wp/wp-admin/>

We hope the installation process was easy.

NOTE: Softaculous is just an automatic software installer and does not provide any support for the individual software packages. Please visit the software vendor's web site for support!

Regards,
Softaculous Auto Installer
